LAST UPDATED: JULY 2016

The most up-to-date Argus Biofuels methodology is available on www.argusmedia.com

Methodology overview

Methodology rationale

Argus strives to construct methodologies that reflect the way the market trades. Argus aims to produce price assessments which are reliable indicators of commodity market values, free from distortion and representative of spot market values. As a result, the specific currencies, volume units, locations and other particulars of an assessment are determined by industry conventions.

In the European biofuels market, Argus publishes physical market prices in the open spot market as laid out in the specifications and methodology guide. Argus uses the trading period deemed by Argus to be most appropriate, in consultation with industry, to capture spot liquidity. Argus assesses some biofuel markets as a basis differential to Ice gasoil settlement prices to arrive at fixed prices because the futures settlement price is a representative price reference.

Additionally, Argus reflects European biofuel swap market prices as a bid-offer range at 4:30pm London time. This approach aligns the financial swap with its underlying futures settlement price at 4:30pm London time.

In order to be included in the assessment process, deals must meet the minimum volume, delivery, timing and specification requirements in our methodology. In illiquid markets, Argus assesses the range within which product could have traded by applying a strict process outlined later in this methodology.

Survey process

Argus price assessments are informed by information received from a wide cross section of market participants, including producers, consumers and intermediaries. Argus reporters engage with the industry by proactively polling participants for market data.

Argus will contact and accept market data from all credible market sources including front and back office of market participants and brokers. Argus will also receive market data from electronic trading platforms, Argus Open Markets™ (AOM™) and directly from the back offices of market participants. Argus will accept market data by telephone, instant messenger, email, AOM or other means.

Argus encourages all sources of market data to submit all market data to which they are a party that falls within the Argus stated methodological criteria for the relevant assessment. Argus encourages all sources of market data to submit transaction data from back office functions.

Throughout all markets, Argus is constantly seeking to increase the number of companies willing to provide market data. Reporters are mentored and held accountable for expanding their pool of contacts. The number of entities providing market data can vary significantly from day to day based on market conditions.

For certain price assessments identified by local management, if more than 50pc of the market data involved in arriving at a price assessment is sourced from a single party the supervising editor

will engage in an analysis of the market data with the primary reporter to ensure that the quality and integrity of the assessment has not been affected.

Market data usage

In each market, Argus uses the methodological approach deemed to be the most reliable and representative for that market. Argus will utilise various types of market data in its methodologies, to include:

- Transactions
- Bids and offers
- Other market information, to include spread values between grades, locations, timings, and many other data.

In many markets, the relevant methodology will assign a relatively higher importance to transactions over bids and offers, and a relatively higher importance to bids and offers over other market information. Certain markets however will exist for which such a hierarchy would produce unreliable and non-representative price assessments, and so the methodology must assign a different relative importance in order to ensure the quality and integrity of the price assessment. And even in markets for which the hierarchy normally applies, certain market situations will at times emerge for which the strict hierarchy would produce non-representative prices, requiring Argus to adapt in order to publish representative prices.

Verification of transaction data

Reporters carefully analyse all data submitted to the price assessment process. This data includes transactions, bids, offers, volumes, counterparties, specifications and any other information that contributes materially to the determination of price. This high level of care described applies regardless of the methodology employed. Specific to transactions, bids, and offers, reporters seek to verify the price, the volume, the specifications, location basis, and counterparty.

Several tests are applied by reporters in all markets to transactional data to determine if it should be subjected to further scrutiny. If a transaction has been identified as failing such a test, it will receive further scrutiny. For assessments used to settle derivatives and for many other assessments, Argus has established internal procedures that involve escalation of inquiry within the source's company and escalating review within Argus management. Should this process determine that a transaction should be excluded from the price assessment process, the supervising editor will initiate approval and, if necessary, documentation procedures.

Primary tests applied by reporters

- Transactions not transacted at arm's length, including deals between related parties or affiliates.
- Transaction prices that deviate significantly from the mean of all transactions submitted for that day.
- Transaction prices that fall outside of the generally observed lows and highs that operated throughout the trading day.
- Transactions that are suspected to be a leg of another transaction or in some way contingent on an unknown transaction.
- Single deal volumes that significantly exceed the typical transaction volume for that market.

- Transaction details that are identified by other market participants as being for any reason potentially anomalous and perceived by Argus to be as such.
- Transaction details that are reported by one counterparty differently than the other counterparty.
- Any transaction details that appear to the reporter to be illogical or to stray from the norms of trading behaviour. This could include but is not limited to divergent specifications, unusual delivery location and counterparties not typically seen.
- Transactions that involve the same counterparties, the same price and delivery dates are checked to see that they are separate deals and not one deal duplicated in Argus records.

Secondary tests applied by editors for transactions identified for further scrutiny

Transaction tests

- The impact of linkage of the deal to possible other transactions such as contingent legs, exchanges, options, swaps, or other derivative instruments. This will include a review of transactions in markets that the reporter may not be covering.
- The nature of disagreement between counterparties on transactional details.
- The possibility that a deal is directly linked to an offsetting transaction that is not publicly known, for example a “wash trade” which has the purpose of influencing the published price.
- The impact of non-market factors on price or volume, including distressed delivery, credit issues, scheduling issues, demurrage, or containment.

Source tests

- The credibility of the explanation provided for the outlying nature of the transaction.
- The track record of the source. Sources will be deemed more credible if they
 - Regularly provide transaction data with few errors.
 - Provide data by Argus’ established deadline.
 - Quickly respond to queries from Argus reporters.
 - Have staff designated to respond to such queries.
- How close the information receipt is to the deadline for information, and the impact of that proximity on the validation process.

Assessment guidelines

As insufficient, inadequate, or no transaction information may exist in the biofuels markets, Argus reporters will make an assessment of market value by applying intelligent judgment based on a broad array of factual market information. Reporters must use a high degree of care in gathering and validating all market data used in determining price assessments, a degree of care equal to that applying to gathering and validating transactions. The information used to form an assessment could include deals done, bids, offers, tenders, spread trades, exchange trades, fundamental supply and demand information and other inputs.

The assessment process employing judgment is rigorous, replicable, and uses widely accepted valuation metrics. These valuation metrics mirror the process used by physical commodity traders to internally assess value prior to entering the market with a bid or offer. Applying these valuation metrics along with sound judgment significantly narrows the band within which a commodity can be assessed, and greatly increases the accuracy and consistency of the price series. The application of judgment is conducted jointly with the supervising editor, in order to be sure that guidelines below are being followed. Valuation metrics include the following:

Relative value transactions

Frequently transactions occur which instead of being an outright purchase or sale of a single commodity, are instead exchanges of commodities. Such transactions allow reporters to value less liquid markets against more liquid ones and establish a strong basis for the exercise of judgment.

- Exchange one commodity for a different commodity in the same market at a negotiated value.
- Exchange delivery dates for the same commodity at a negotiated value.
- Exchange a commodity in one location for the same commodity at another location at a negotiated value.

Bids and offers

If a sufficient number of bids and offers populate the market, then the highest bid and the lowest offer can be assumed to define the boundaries between which a deal could be transacted.

Comparative metrics

The relative values between compared commodities are readily discussed in the market and can be discovered through dialogue with market participants. These discussions are the precursor to negotiation and conclusion of transactions.

- Comparison to the same commodity in another market centre.
- Comparison to a more actively traded but slightly different specification commodity in the same market centre.
- Analysis of prices in forward markets for a physically deliverable commodity that allow extrapolation of value into the prompt timing for the commodity assessed.
- Comparison to the commodity’s primary feedstock or primary derived product(s).
- Comparison to trade in the same commodity but in a different modality (as in barge versus oceangoing vessel) or in a different total volume (as in full cargo load versus partial cargo load).

Volume minimums and transaction data thresholds

Because of the varying transportation infrastructure and varying specifications traded for different European markets, Argus does not establish thresholds on the basis of a count of transactions, or volumes traded in biofuel markets, as this would lead to unreliable and non-representative assessments. Argus will typically use comparative metrics (as defined above) and relative value transactions to determine price assessments in the absence of confirmed transaction data. As no transaction threshold exists, Argus follows

the procedures outlined elsewhere in this document regarding the exercise of judgment in the price assessment process.

Basis differentials and absolute prices

In some biofuels markets, differentials to futures are the negotiated bids, offers, and transaction values. In these circumstances Argus fixed prices are derived by adding the differentials to the Ice gasoil futures settlement prices or other reference as appropriate and specified.

Swaps and forwards markets

Argus publishes forward assessments for numerous markets. These include forward market contracts that can allow physical delivery and swaps contracts that swap a fixed price for the average of a floating published price. Argus looks at forward swaps to inform physical assessments but places primary emphasis on the physical markets.

Publications and price data

Argus biofuels prices for Europe are published in the Argus Biofuels report. The price data are available independent of the text-based report in electronic files that can feed into various databases. These price data are also supplied through various third-party data integrators. The Argus website also provides access to prices, reports and news with various web-based tools. All Argus prices are kept in a historical database and available for purchase. Contact your local Argus office for information.

Corrections to assessments

Argus will on occasion publish corrections to price assessments after the publication date. We will correct errors that arise from clerical mistakes, calculation errors, or a misapplication of our stated methodology. Argus will not retroactively assess markets based on new information learned after the assessments are published. We make our best effort to assess markets based on the information we gather during the trading day assessed.

Ethics and compliance

Argus operates according to the best practices in the publishing field, and maintains thorough compliance procedures throughout the firm. We want to be seen as a preferred provider by our subscribers, who are held to equally high standards, while at the same time maintaining our editorial integrity and independence. Argus has a strict ethics policy that applies to all staff. The policy can be found on our website at www.argusmedia.com. Included in this policy are restrictions against staff trading in any energy commodity or energy related stocks, and guidelines for accepting gifts. Argus also has strict policies regarding central archiving of email and instant messenger communication, maintenance and archiving of notes, and archiving of spreadsheets and deal lists used in the price assessment process. Argus publishes prices that report and reflect prevailing levels for open-market arm's length transactions (please see the [Argus Global Compliance Policy](#) for a detailed definition of arm's length).

Consistency in the assessment process

Argus recognises the need to have judgment consistently applied by reporters covering separate markets, and by reporters replacing existing reporters in the assessment process. In order to ensure

this consistency, Argus has developed a programme of training and oversight of reporters. This programme includes:

- A global price reporting manual describing among other things the guidelines for the exercise of judgment.
- Cross-training of staff between markets to ensure proper holiday and sick leave backup. Editors that float between markets to monitor staff application of best practices.
- Experienced editors overseeing reporting teams are involved in daily mentoring and assisting in the application of judgment for illiquid markets.
- Editors are required to sign-off on all price assessments each day, thus ensuring the consistent application of judgment.

Review of methodology

The overriding objective of any methodology is to produce price assessments which are reliable indicators of commodity market values, free from distortion and representative of spot market values. As a result, Argus editors and reporters are regularly examining our methodologies and are in regular dialogue with the industry in order to ensure that the methodologies are representative of the physical market being assessed. This process is integral with reporting on a given market. In addition to this ongoing review of methodology, Argus conducts reviews of all of its methodologies and methodology documents on at least an annual basis.

Argus market report editors and management will periodically and as merited initiate reviews of market coverage based on a qualitative analysis that includes measurements of liquidity, visibility of market data, consistency of market data, quality of market data and industry usage of the assessments. Report editors will review:

- Appropriateness of the methodology of existing assessments
- Termination of existing assessments
- Initiation of new assessments

The report editor will initiate an informal process to examine viability. This process includes:

- Informal discussions with market participants
- Informal discussions with other stakeholders
- Internal review of market data

Should changes, terminations, or initiations be merited, the report editor will submit an internal proposal to management for review and approval. Should changes or terminations of existing assessments be approved, then formal procedures for external consultation are begun.

Changes to methodology

Formal proposals to change methodologies typically emerge out of the ongoing process of internal and external review of the methodologies. Formal procedures for external consultation regarding material changes to existing methodologies will be initiated with an announcement of the proposed change published in the relevant Argus report. This announcement will include:

- Details on the proposed change and the rationale
- Method for submitting comments with a deadline for submissions
- For prices used in derivatives, notice that all formal comments will be published after the given consultation period unless submitter requests confidentiality

Argus will provide sufficient opportunity for stakeholders to analyse and comment on changes, but will not allow the time needed to follow these procedures to create a situation wherein unrepresentative or false prices are published, markets are disrupted, or market participants are put at unnecessary risk. Argus will engage with industry throughout this process in order to gain acceptance of proposed changes to methodology. Argus cannot however guarantee universal acceptance and will act for the good order of the market and ensure the continued integrity of its price assessments as an overriding objective.

Following the consultation period, Argus management will commence an internal review and decide on the methodology change. This will be followed by an announcement of the decision which will be published in the relevant Argus report and include a date for implementation. For prices used in derivatives, publication of stakeholders' formal comments that are not subject to confidentiality and Argus' response to those comments will also take place.

Price assessments — introduction

Argus Biofuels is a daily market report that publishes prices and market commentary on the international bulk spot market for biofuels. Argus Biofuels contains price assessments for different types of spot contracts at specified locations. The market commentary is on the main regional market at Rotterdam.

The assessed prices are based on prices from the open spot market whenever possible.

All assessments and formulas refer to the price of the product on the day of the published report and are expressed in US dollars unless otherwise stated. The prices are for contracts under whatever general terms and conditions are accepted as standard and prevailing in that particular market. Price changes refer to the last published report.

For those grades of biodiesel shown with a *, Argus will typically use physical premiums traded to an Ice gasoil strip, taking an average of settlement prices for the first or first and second forward month Ice gasoil contract for 7-28 days forward from the day of publication to form its assessments.

Trades of all main biodiesel grades (on a fob ARA range basis) to be considered in Argus assessments need to be accompanied with a documentation of Proof of Sustainability (POS). Trades need to be accompanied with a POS transfer range of 20 working days (after balance of loading) between participants to be considered for assessment purposes.

Trades on all main biodiesel grades (on a fob ARA range basis) need to be accompanied with terms of barge shipping tolerance of +/- 2pc at buyer's option.

Spot price assessments

Crude rapeseed oil

Fob Dutch Mill

Prices are in euros/tonne

Size is minimum 100t.

Delivery is during the named three-month period

- February, March, April (FMA)
- May, June, July (MJJ)
- August, September, October (ASO)
- November, December, January (NDJ)

Price assessments for the first two forward three-month periods are published. Forward periods roll on the first working day of the three-month period.

For example, on 15 May, prices are published for the August, September, October (ASO) and November, December, January (NDJ) contracts. On 1 August, prices are published for November, December, January (NDJ) and February, March, April (FMA) contracts.

Price assessments are published twice each day for both forward contracts. The intra-day assessment includes market information from 9:30am-12:30pm UK time and the afternoon assessment includes market information from 12:30pm-4:30pm UK time.

RED Palm OME fob ARA range*

Palm oil methyl ester.

Prices are in US dollars/tonne.

The pricing period is for one to four weeks forward.

The basis is fob ARA range — including Antwerp, Rotterdam, Amsterdam, Dordrecht, Flushing and Ghent.

Size is 1,000t

Cold filter plugging point 15°C.

Material must be accompanied with RED-compliant certification issued by European Commission-approved auditing body.

The assessment time is 4.00pm to 4.30pm London time.

RED rapeseed OME fob ARA range*

Rapeseed oil methyl ester meeting EN14214 specifications.

Prices are in US dollars/tonne.

The pricing period is for one to four weeks forward.

The basis is fob ARA range — including Antwerp, Rotterdam, Amsterdam, Dordrecht, Flushing and Ghent.

Size is 1,000t

Cold filter plugging point -12°C.

300ppm water content.

Material must be accompanied with RED-compliant certification issued by European Commission-approved auditing body.

Argus will reflect qualities that are based on 57pc greenhouse gas savings, based on a fossil fuel comparator of 83.8g CO₂ equivalent/MJ.

The assessment time is 4.00pm to 4.30pm London time.

For the purposes of price assessment it is assumed that RED rapeseed OME fob ARA can replace FAME 0° CFPP. Accordingly, the published RED rapeseed OME fob ARA price assessment will never fall below parity with the FAME 0° CFPP price assessment published in Argus Biofuels.

If the assessment process results in a RED rapeseed OME fob ARA price that is below the contemporaneous assessment of FAME 0° CFPP fob ARA, the RED rapeseed OME fob ARA price assessment will be set equal to the FAME 0° price assessment.

RED Soya OME fob ARA range*

Soya oil methyl ester.

Prices are in US dollars/tonne.

The pricing period is for one to four weeks forward.

The basis is fob ARA range — including Antwerp, Rotterdam, Amsterdam, Dordrecht, Flushing and Ghent.

Size is 1,000t

Cold filter plugging point -4°C.

Material must be accompanied with RED-compliant certification issued by European Commission-approved auditing body.

The assessment time is 4.00pm to 4.30pm London time.

RED FAME 0°C CFPP fob ARA range*

Fatty acid methyl ester (Fame) meeting EN14214 specifications.

Prices are in US dollars/tonne.

German-mandate compliant: Any feedstock except animal oils and fats in line with § 37b of the “Bundes-Immissionsschutzgesetz” and “Biomasseverordnung”.

The pricing period is for one to four weeks forward.

The basis is fob ARA range — including Antwerp, Rotterdam, Amsterdam, Dordrecht, Flushing and Ghent.

Size is 1,000t

Cold filter plugging point 0°C.

350ppm water content.

Material must be accompanied with RED-compliant certification issued by European Commission-approved auditing body.

Argus will reflect qualities that are based on 57pc greenhouse gas savings, based on a fossil fuel comparator of 83.8g CO₂ equivalent/MJ.

The assessment time is 4.00pm to 4.30pm London time.

RED FAME -10°C CFPP fob ARA range*

Fatty acid methyl ester (Fame) meeting EN14214 specifications.

Prices are in US dollars/tonne.

The pricing period is for one to four weeks forward.

The basis is fob ARA range — including Antwerp, Rotterdam, Amsterdam, Dordrecht, Flushing and Ghent.

Size is 1,000t

Cold filter plugging point -10°C.

Argus will reflect qualities that are based on 57pc greenhouse gas savings, based on a fossil fuel comparator of 83.8g CO₂ equivalent/MJ.

The assessment time is 4.00pm to 4.30pm London time.

RED FAME 0°C CFPP cif Genoa

Prices are in US dollars/tonne.

Fatty acid methyl ester (Fame) meeting EN14214 specifications.

Virgin vegetable oil, 350ppm water content.

The assessment will take into account local market blendstock dynamics as they relate to prompt FAME zero equivalent prices.

The price assumes all duties are paid.

The pricing period is for one to four weeks forward.

Size is 1,000t

Cold filter plugging point 0°C.

The assessment time is 4.00pm to 4.30pm London time.

The assessment reflects RED-certified product.

RED (EU) UCOME

Used cooking oil methyl ester meeting EN14214.

Prices are in US dollars/tonne.

The pricing period is for one to four weeks forward.

The basis is fob ARA range — including Antwerp, Rotterdam, Amsterdam, Dordrecht, Flushing and Ghent.

Size is 1,000t.

Cold filter plugging point 0-4°C.

Max 350ppm water content.

Material must be accompanied with RED-compliant certification issued by a European Commission-approved auditing body.

The assessment time is 4.00pm to 4.30pm London time.

RED (DE) UCOME

Used cooking oil methyl ester meeting EN14214.

Prices are in US dollars/tonne.

The pricing period is for one to four weeks forward.

The basis is fob ARA range — including Antwerp, Rotterdam, Amsterdam, Dordrecht, Flushing and Ghent.

Size is 1,000t.

Cold filter plugging point 0-4°C.

Max 350ppm water content.

Material must be accompanied with RED-compliant certification issued by a European Commission-approved auditing body recognised in Germany

The assessment time is 4.00pm to 4.30pm London time.

RED (EU) TME

Tallow methyl ester meeting EN14214.

Prices are in US dollars/tonne.

The pricing period is for one to four weeks forward.

The basis is fob ARA range — including Antwerp, Rotterdam, Amsterdam, Dordrecht, Flushing and Ghent.

Size is 1,000t.

Cold filter plugging point 12-13°C

Max 350ppm water content.

Material must be accompanied with RED-compliant certification issued by a European Commission-approved auditing body.

The assessment time is 4.00pm to 4.30pm London time.

RED PME fob Malaysia

Palm oil methyl ester.

Prices are in US dollars/tonne.

Prices are for cargoes loading 2-6 weeks forward from date of publication.

The basis is fob Malaysia (Port Klang/Pasir Gudang).

Assessments are standardised to cargoes of 2,000t to 10,000t.

The specifications reflect European EN14214 standard, with cold

filter plugging point 15°C.

Product must be accompanied with RED-compliant certification issued by European Commission-authorized body.

The time stamp is 5.30pm Singapore time.

RED PME fob Indonesia

Palm oil methyl ester.

Prices are in US dollars/tonne.

Prices are for cargoes loading 2-6 weeks forward from date of publication.

The basis is fob Indonesia (Port Dumai).

Assessments are standardised to cargoes of 2,000t to 40,000t.

The specifications reflect European EN14214 standard, with cold filter plugging point 15°C.

Product must be accompanied with RED-compliant certification issued by European Commission-authorized body.

The time stamp is 5:30pm Singapore time.

RED PME fob Singapore

Palm oil methyl ester.

Prices are in US dollars/tonne.

Prices are for cargoes loading 2-6 weeks forward from date of publication.

The basis is fob Singapore.

Assessments are standardised to cargoes of 2,000t to 40,000t.

The specifications reflect European EN14214 standard, with cold filter plugging point 15°C.

Product must be accompanied with RED-compliant certification issued by European Commission-authorized body.

The time stamp is 5.30pm Singapore time.

Palm olein fob Malaysia/Indonesia

Prices are in US dollars/tonne.

For bulk cargoes 500-2,000t

Loading 2-4 weeks forward

Fatty acid maximum 0.1pc

Moisture and impurities maximum 0.1pc

Iodine value minimum of 56

Melting point at maximum 24 Deg C

Colour is min 3 red

Time stamp: 6.30pm Singapore time

Prices are published for the first three months trading

SME fob upriver, Argentina

Prices reflect the previous day's close in the US. For specifications, please see the [Argus Americas Biofuels](#) methodology.

Argentinian soybean oil

Prices reflect the previous day's close in the US. For specifications, please see the [Argus Americas Biofuels](#) methodology.

SME fob US Houston B100

Prices are in US dollars/tonne

Soy methyl ester with 100pc purity. Conforms to ASTM D6751.

The pricing period is 3-15 days forward.

The basis is fob Houston rail/barge.

Size is minimum 3,000 bl.

SME fob US Houston B100 €/USG

Soya methyl ester with 100pc purity. Conforms to ASTM D6751.

The pricing period is 3-15 days forward.

The basis is fob Houston rail/barge.

Size is minimum 3,000 bl.

German diesel 10ppm barge

See [Argus European Products methodology](#) for details.

Freight

Argus Biofuels contains freight cost assessments. Freight assessments are published weekly and represent the price on the day of publication. Assessments are based on fixtures and market discussions for the relevant cargo, volume, route and timings. Freight assessments are published in US dollars/t.

Freight specifications			
Commodity	Route	Volume	Timing
Palm oil	Malaysia to ARA region	15,000-30,000t	15-30 days forward
Palm oil	Malaysia to Mediterranean region (including Genoa, Barcelona and Huelva)	15,000-30,000t	15-30 days forward
PME	Malaysia to ARA region	3,000-5,000t	15-30 days forward
PME	Malaysia to Mediterranean region (including Genoa, Barcelona and Huelva)	3,000-5,000t	15-30 days forward

Reference prices

Glycerine fob SE Asia

Prices are in US dollars/tonne

Glycerine reference price refers to standard Refined Glycerine grade (min 99.7 purity) basis fob southeast Asia, based on notional bid/offer levels.

Malaysia, Palm oil futures

Prices are in Malaysian ringit/tonne

Prices as published by the Bursa Malaysia palm futures exchange.

Ethanol spot price assessments

RED (T2) Ethanol fob Rotterdam, inc duty

Quality is EU specification (EN 15376).

Prices are in euros/m³.

The pricing period is for 5-15 days forward.

The basis is fob Rotterdam, including neighbouring regional locations.

Size is minimum 1,000m³, maximum 5,000m³.

Material must be accompanied with RED-compliant certification is-

sued by European Commission-approved auditing body.
The assessment time is 8.30am to 5.30pm London time.

RED (T2) Ethanol fob Rotterdam, inc duty

Quality is EU specification (EN 15376).
Prices are in US dollars/tonne.
The pricing period is for 5-15 days forward.
The basis is fob Rotterdam, including neighbouring regional locations.
Size is minimum 1,000m³, maximum 5,000m³.
Material must be accompanied with RED-compliant certification issued by European Commission-approved auditing body.
The assessment time is 8.30am to 5.30pm London time.

RED (T2) fob Rotterdam inc duty differential to Eurobob oxy

Argus RED T2 ethanol differentials to Argus Eurobob oxy prices are calculated using a daily basket of foreign exchange rates and 0.789m³ volume to metric tonne weight conversion.
Prices are in US dollars/tonne.
See [Argus European Products methodology](#) for details of Argus Eurobob oxy barges.
The assessment time is 8.30am to 5.30pm London time.

Ethanol fob Pakistan

99.7pc anhydrous fuel-grade ethanol.
Prices are in US dollars/tonne.
The pricing period is for 30-60 days forward.
The basis is fob Pakistan (Karachi).
Assessments are standardised to cargoes of 800-5,000t.
The time stamp is 5.30pm Singapore time.

Ethanol fob Pakistan (hydrous)

95pc hydrous fuel-grade ethanol.
Prices are in US dollars/tonne.
The pricing period is for 30-60 days forward.
The basis is fob Pakistan (Karachi).
Assessments are standardised to cargoes of 800-5,000t.
The time stamp is 5.30pm Singapore time.

Ethanol cfr Mumbai

99pc anhydrous fuel-grade ethanol.
Prices are in US dollars/tonne.
Prices are for cargoes for delivery 30-60 days forward from date of publication.
Prices are exclusive of duties and taxes at destination.
Argus will add freight costs to Mumbai to various fob assessments for ethanol, including, but not limited to, Brazil's Santos, Thailand's Prapadaeng and Chicago in the US. The lowest price derived will represent the cfr Mumbai price.
Size is standardized to cargoes of 20,000-30,000t.

Ethanol fob Thailand

99.5pc anhydrous fuel-grade ethanol.
Prices are in US dollars/tonne.
The pricing period is for 30-60 days forward.
The basis is fob Thailand (Prapadaeng).

Assessments are standardised to cargoes of 800-5,000t.
The time stamp is 5.30pm Singapore time.

Ethanol cfr Philippines

99pc anhydrous fuel-grade ethanol.
Prices are in US dollars/m³
The pricing period is for 30-60 days forward.
The basis is cfr Philippines (Subic Bay/Batangas).
Assessments are standardised to cargoes of 800-5,000t.
The time stamp is 5.30pm Singapore time.

B-grade cfr northeast Asia

95pc hydrous ethanol.
Prices are in US dollars/m³.
The pricing period is for 30-60 days forward.
The basis is cfr northeast Asia (Ulsan/Chiba).
Assessments are standardised to cargoes of 800-5,000t.
The time stamp is 5.30pm Singapore time.

Ethanol Rotterdam del Mideast Gulf

Prices are in US dollars/tonne.
Prices will be constructed by adding freight costs to the fob Rotterdam T1 assessment for converted from \$/m³ to \$/t using an Argus Rotterdam-Mideast Gulf freight assessment except when Argus deems it inappropriate due to market information which suggests a more appropriate price level.
EN specification ethanol.
Size is minimum 10,000t, maximum 12,000t.

Gasoline 95R cif NWE

See [Argus European Products methodology](#) for details.

Forward price assessments and swaps

All RED swaps and forward assessments assume product that is accompanied with RED-compliant certification issued by the European Commission-approved auditing body. All RED swaps and forward prices are assessed for three months and three quarters forward. The last day of assessment of the first forward month will be the 15th of that month, and the last day of assessment of the first forward quarter will be the 15th of the month preceding the start of the quarter.

Swap and forward price assessments are published for:

- RME RED swap
- PME RED forward physical
- RED FAME -10° C forward physical
- SME RED forward physical
- FAME 0°C RED swap

See spot price assessments above for specifications.

Ice gasoil swap

The front-month Ice gasoil swaps value is calculated as the number of working days in the current calendar month including and

between the publication date and the last working day of the month pro-rata for the two possible Ice gasoil front-month settles based on the days covered by each contract.

Ice gasoil settle

These are the official settlement figures published by Ice in London.

Palm oil-gasoil spread (Pogo)

The spread between the third forward month Bursa Malaysia palm oil futures settlement price and the corresponding Ice low sulphur gasoil futures settlement price.

Prices are in US dollars/tonne.

Palm oil futures prices are converted to US dollars and rounded to the nearest \$0.25/t.
